

RECYCLE MORE AND WASTE LESS WITH MINI-BINS!

To help achieve a sustainable campus a new Mini-Bin system will be introduced at all work stations.

This will enable you to reduce waste going to landfill and increase the amount of recycling.

The system involves substituting a small red desk-top landfill Mini-Bin for the old general waste bin and the provision of a larger yellow mixed recycling bin under each desk.

The main aims of the Mini-Bin system are to:

- increase our recycling rate
- reduce waste going to landfill
- increase individual responsibility for waste created
- reduce time cleaners spend on emptying bins
- reduce the number of plastic liners going to landfill

What does this mean for you?

- You will have more opportunity to recycle.
- You only need to empty your red landfill Mini-Bin daily into larger landfill waste bins located in kitchens.
- The new yellow mixed recycling bins will be emptied daily by the cleaning staff.
- Both bins are easily cleanable so do not need bin liners.
